

Thinking & Learning Conference

Dr Susan

Brookhart

Session Handouts

DAY TWO

Wednesday 25 May 2016

ADELAIDE

HILTON ADELAIDE HOTEL

Conference Schedule

DAY ONE – Saturday 24 May

CONFERENCE OPENING	8.15 a.m.
SESSION ONE	8.30 a.m. – 10.30 a.m.
MORNING TEA	10.30 a.m. – 11.00 a.m.
SESSION TWO	11.00 a.m. – 1.00 p.m.
LUNCH	1.00 p.m. – 2.00 p.m.
SESSION THREE	2.00 p.m. – 4.00 p.m.

DAY TWO – Sunday 25 May

SESSION ONE	8.30 a.m. – 10.30 a.m.
MORNING TEA	10.30 a.m. – 11.00 a.m.
SESSION TWO	11.00 a.m. – 1.00 p.m.
LUNCH	1.00 p.m. – 2.00 p.m.
SESSION THREE	2.00 p.m. – 4.00 p.m.

Presenters

Dr Susan Brookhart

Susan (PhD) is an independent educational consultant based in Helena, Mont., and senior research associate at the Center for Advancing the Study of Teaching and Learning in the School of Education at Duquesne University.

Gavin Grift

Gavin is executive director of Hawker Brownlow Professional Learning Solutions. With experience as a teacher, assistant principal and educational coach, Gavin's passion, commitment and style have made him an in-demand presenter of keynotes, seminars and in-school support days. As a speaker, Gavin connects with national and international audiences on topics ranging from Cognitive Coaching and quality teacher practice to professional learning communities and learning-centred leadership.

Jan Hoegh

Jan is associate vice president of Marzano Research in Colorado. During her 28 years in education, she has been a classroom teacher, building-level leader, professional development specialist, high school principal and curriculum coordinator. As a member of the Marzano Research team, Jan has published several books with Hawker Brownlow Education.

Jay McTighe

Jay is a noted consultant with a rich and varied career in education. His international reputation grew from Maryland, USA, where his work with 'thinking skills' developed instructional strategies, curriculum models and assessment procedures. Jay has co-authored 12 books, including the best-selling Understanding by Design® series with Grant Wiggins.

Colin Sloper

Colin is a director of the Centre for Professional Learning Communities. He has been a teacher, assistant principal and principal in government schools for 35 years, spending the last seven years as principal at Pakenham Springs Primary School in Victoria. Because of his leadership and collaborative work with the school community, Pakenham Springs became Australia's first recognised model of a professional learning community.

— CONTENTS —

DAY TWO – WEDNESDAY 25 MAY

SESSION 1 (8.30am–10.30am)

Quality Questioning 1

SESSION 2 (11.00am–1.00pm)

Rubrics 11

SESSION 3 (2.00pm–4.00pm)

Performance Assessment 17

Session 1

Quality Questioning

The most helpful formative assessment relies on evidence of the quality of student thinking, as opposed to evidence of some amount of achievement like a percent-correct score on an assessment. In this session participants will learn how to create questions that assess student thinking, concentrating on formative uses.

Quality Questioning

Sue Brookhart

Hawker Brownlow 13th Annual
Thinking and Learning Conferences
Melbourne – Adelaide – Perth
May, 2016

Session Summary

The most helpful formative assessment relies on evidence of the quality of student thinking, as opposed to evidence of some amount of achievement as in a percent-correct score on an assessment. In other words, “how well” do they think, not “how much.” This session will describe how to create questions that assess student thinking, concentrating on formative uses. Participants will learn:

- How to write open questions and even some kinds of closed questions that elicit evidence of student thinking
- How to interpret student answers in terms of what they are thinking, not just degree of correctness

Session Outline

- Generating principles for quality questioning
 - A Tale of Two Lessons, (pp.3-7)
- Writing open questions
 - Examples to classify, (pp.8-9)
 - Lead questions
 - Follow-up prompts and probes
- Interpreting student responses
- Reversing the effects of the I-R-E (Initiate-Respond-Evaluate) questioning sequence
- Teaching students to ask effective questions

Advancing Formative Assessment in Every Classroom, by Connie M. Moss & Susan M. Brookhart, 2009, ASCD.

A TALE OF TWO LESSONS

Two third grade classes are having a science lesson on dissolving. In their previous lesson, both classes mixed a variety of solids and liquids together and the teacher asked the children to observe what happened. Both teachers have written detailed plans with the following clear learning objective – “Children should learn that some solids dissolve in water and that although the solid cannot be seen, it is still present.” Both teachers have good classroom control and both have sufficient good quality equipment readily available. Their lessons proceed as follows.

Teacher A

Teacher: Right. Watch me as I show you what I want you to do today for science. Here is a beaker. I'm going to put in some water to about half way. I've got some salt here. I'm going to add a spoonful of salt to the water and stir it. Before I do that, tell me – is salt a solid or a liquid?

Two pupils wave their hands in the air and teacher nods in the direction of one of them.

Pupil W: A solid.

Teacher: Good. So I'm going to add this solid salt to the water. Is water a solid or a liquid?

Ten pupils put their hands up. Teacher picks one of the lower achieving pupils to answer.

Pupil X: A solid.

Teacher: Is it?

Pupil W: No, it's a liquid.

Teacher: That's right. So I add this solid salt to this liquid water and stir. Look the salt has mixed in with the water. You can't see it any more, but it's still there. We can use another sense to make sure of that – we could taste it. Salty water isn't harmful so we can taste it safely.

Teacher dips finger in solution and tastes it.

Teacher: Ugh! Salty. Now, when a solid mixes in with a liquid like this, so you can't see it any more, we say it has dissolved. And we call the mixture a solution. What I want you to do today is to mix some different solids with water to see if they dissolve. You will try three different solids, sugar, flour and sand.

Teacher organizes the class into groups. Pupils collect equipment and work through the task, recording their results by putting a check or an X against the name of each solid to show whether it has dissolved or not. Teacher goes round to each group to make sure they are following the instructions and keeping to the task.

Teacher: OK. You've all finished. What did you find out? Did the sand dissolve and form a solution with the water?

Pupils all wave hands in the air. Teacher selects one to answer.

Pupil Y: No.

Teacher: Good. And what about the sugar?

Pupils all wave hands in the air again. Teacher selects one to answer.

Pupil Z: It dissolved.

Teacher: Right. And the flour?

Pupils all wave hands in the air. Teacher selects Pupil X to answer.

Pupil X: Yes.

Teacher: Are you sure? Did it dissolve?

Pupil X: No.

Teacher: No, it didn't. So the only solid that dissolved in the water and made a solution was the sugar. Check that you've all got a check mark by sugar. Neither the flour nor the sand dissolved. Check that you put an X by them. Change it if you need to. Well that was pretty straightforward wasn't it? Well done. You've worked well today. Now clear away your equipment and you can go out to play.

From: Goldsworthy A. (2000) *Raising Attainment in Primary Science GHPD*, Reed Educational and Professional Publishing Ltd. Reproduced here from a handout designed by the Learning How to Learn project © 2002.

Teacher B

Teacher: Right. In our last science lesson we mixed some different materials together and described what happened. Some of you used this word.

Teacher writes 'dissolving' on the board.

Teacher: I've looked at your work and some of you seemed to be using the word dissolving in different ways. What we are going to do today is think about what we mean by dissolving. At the end of this lesson I will be looking for children who have a very clear idea of how we know when something has dissolved. OK. The first thing I want you to do is to imagine that a friendly alien has just landed on Earth and wants you to explain what dissolving means. Remember that the alien knows nothing about it. Work with your partner and decide what you would say. You have three minutes. Go.

Teacher does not interfere with pupils while they are talking in pairs.

Teacher: Right – I'd like to hear your ideas. Let's start with you two.

Teacher indicates a pair of pupils.

Pupil M: We thought that when something dissolves it disappears.

Teacher: Thanks, I'll write that on the board. Let's see if there are any other ideas.

Teacher indicates another pair of pupils.

Pupil N: We said that you have to mix things up to make them dissolve.

Teacher: So you're saying that dissolving is mixing things up. Have I got that right?

Pupil N: Yes, that's what we thought anyway.

Teacher: OK. That's another idea. I'll write that down.

Teacher continues taking in a few more ideas and writing them on the board.

Teacher: Thanks for that. You've come up with lots of ideas about the word dissolving. We'll look at our ideas again at the end of the lesson and see whether we still agree with them. Right, now what I want you to do is to try mixing three different solids – sugar, sand and flour – with some water. Get three beakers of water and add in a spoonful of each substance and stir them. While you do it, I want you to think about these three things:

Teacher writes these three questions on the board.

1. *What do the three materials look like before you mix them with the water?*
2. *Can something still be there, even if you can't see it?*

3. *What do you think the mixtures would look like if you left them to stand for a day?*

Teacher: You will be doing the practical work in groups. Each group needs to write out the three questions, so you can make quick notes beside them while you're doing the practical work. Try to make note of everyone's ideas. I will come around and see what you have said.

Teacher moves among the groups referring to the three questions and challenging pupils to respond.

Teacher: OK. You've all finished. Let's look at your ideas.

Teacher takes in ideas and, with reference to previous work done with the class, establishes that all the materials they added to the water are solids.

Teacher: What about the second question? Can something be there even if we can't see it? What did you think about that one?

Teacher indicates a pair of pupils.

Pupil P: We thought about other things that we know are there but we can't see them, like air.

Pupil Q: Yes. We thought that when the sugar mixes in, it might still be there in the water but we can't see it.

Teacher: OK – so you think the sugar is still there, even though we can't see it. Could you put your hand up if you agree with that?

Most pupils put hands in the air.

Teacher: Some of you didn't agree. Can I ask you (indicates pupil) to tell us why?

Pupil R: Yes. We weren't sure.

Pupil S: Part of me wants to say the sugar's still there, but another part of me says it can't be there if I can't see it.

Teacher: Um – yes it's hard isn't it? If you just use your eyes, it looks as if the sugar has disappeared. I wonder if it's worth thinking about other senses we could use to find out if the sugar's still there.

Pupils R & S: Oh – yeah! We could taste it.

Teacher: Right – good thinking. Sugar and water are safe to taste so will you two come and taste it.

Pupils taste sugar solution and declare it to be sweet.

Teacher: So we seem to be saying that the sugar is there because we can taste it, even though we can't see it. Now what about that last question? What do you think these mixtures will look like after one day? I know you've made some notes. Can you draw three quick sketches to show me what you think they'll look like?

Teacher quickly walks round the class, seeing what is being drawn.

Teacher: OK. Most of you seem to think the sugar and water and the sand and water mixtures will look the same as they do now. I've got some here that I mixed up yesterday. Let's see if you're right.

Teacher produces prepared mixtures.

Teacher: Looks like you're right. Now when it came to thinking about the flour and water mixture, you drew different pictures. Some of you thought it would stay as a cloudy mixture and some of you thought it would separate out. Let's see what happened.

Teacher produces a flour water mixture, which has separated out.

Teacher: So the flour and water didn't stay mixed. Now, you've got two minutes to think about which of the three solid materials dissolved in the water and how we can tell when something has dissolved.

Teacher collects in responses and class works together to produce the following definition of dissolving for the visiting alien, 'Dissolving is when a solid mixes with a liquid so that you can't see any solid bits anymore. Even though you can't see the solid stuff, it is still there. When something has dissolved it stays mixed and doesn't separate out.' Class agrees that only sugar has dissolved. They compare this to their original ideas.

Teacher: Turn to your partners and tell them something you've learned about dissolving today.

Teacher collects in a couple of responses.

Teacher: So do you think we've got a better idea of what we mean by dissolving?

Pupils: Yes.

Teacher: Scientists have to think hard about the words they use and what they mean, and today you've done just that. Well done. You've worked hard. Now clear away your equipment and you can go out to play.

From: Goldsworthy A. (2000) *Raising Attainment in Primary Science GHPD*, Reed Educational and Professional Publishing Ltd. Reproduced here from a handout designed by the Learning How to Learn project © 2002.

EXAMPLES OF TEACHER QUESTIONS - Elementary**Kindergarten reading, “Little Red Hen,” characters and sequence of events**

- Who were the characters in the story? How would you describe them?
- What would you do if asked to help?
- How would you feel if you were the Little Red Hen?
- What lesson did the animals learn at the end of the story?

First grade science, after reading “A Busy Buzzy Bee” (nonfiction).

- What fact did you think was the most interesting and why?
- If you were a bee, what job would you prefer to do? Explain why.

Second grade, Lesson on telling time to the nearest quarter hour

- What are some ways that you have heard someone state the time?
- Why is it important to be able to tell time in a variety of ways?
- How many different ways can you find to divide a circular clock?

Third grade science, Lesson on types of storms and how to stay safe during storms

- What is the difference between a tornado and a hurricane?
- How are a blizzard and an ice storm similar? How are they different?
- How might a thunderstorm affect your spring or summer activities?
- What are some ways to stay safe during a storm? What would happen if you did not [mention the way the student named]?

Fourth grade reading and social studies. In preparation for reading as story about a girl who lived in the Dust Bowl during the Great Depression, students did internet research about the depression and the Dust Bowl.

- How is our life different from the lives of people who lived in the 1920’s and 1930’s?
- What were some solutions for the problems facing people during the Great Depression?
- How would you and your family react if weather conditions here became so bad around here that conditions were unlivable?

Sixth grade Mathematics, Lesson on percents > 100% and < 1%

- What do you think a percent like 101% might mean?
- What do you think a percent like 1/2 % might mean?
- When might we use a percent greater than 100% in school?

EXAMPLES OF TEACHER QUESTIONS - Secondary**Ninth Grade Computer Science, Lesson on performing calculations and constructing graphs in Excel**

- How would you decide whether a pie chart or a bar graph would better represent your data?
- Why is it useful to create formulas and functions in Excel? [This was in response to a student question, “Why can’t we just use a calculator?”]
- What advantages are there in being able to use cell references, and not just numbers, in formulas?
- How might you use a spreadsheet like this in your daily life?

Ninth Grade Language Arts, Lesson on judging the credibility of an internet source

- If you wanted to obtain more information about this web site, who could you contact?
- What other resources could you use to back up or reinforce information presented on this web site?
- How can you tell if the information contained on this web site is true or false?

High School English, Lesson on poetry

- What is poetry?
- Should poetry be left to your own interpretation? Why?
- Should the author’s meaning for the poem be forced on the reader as the only legitimate interpretation? Why?

High School Social Studies, Lesson on copyright laws

- Why do you think we have copyright laws?
- What might happen if you use copyrighted material without permission?
- Do you feel that it is wrong to download music from the internet without paying for it?

High School Chemistry, Lesson exploring the concept of “parts per million”

- In your own words, what does “concentration” mean? Give an example of something that is very concentrated. Why is it concentrated?
- In your own words, what does “dilution” mean? When have you diluted something?
- If you have a 10% solution of food coloring, how many parts are food coloring and how many parts are water?

Session 2

Rubrics

Rubrics are an excellent means for connecting formative assessment and summative assessment (grading). The same criteria and performance quality that students aim for in a formative manner as they learn can become the basis for the students' grades if students and teachers have a shared understanding of the criteria and performance descriptions.

Rubrics

Sue Brookhart

Hawker Brownlow 13th Annual
Thinking and Learning Conferences
Melbourne – Adelaide – Perth
May, 2016

Session Summary

Rubrics are coherent sets of criteria for students' work that include descriptions of levels of performance quality on the criteria. As such, they are an excellent means for connecting formative assessment and summative assessment (grading). The same criteria and performance quality that students aim for in a formative manner as they learn can become the basis for the students' grades if students and teachers have a shared understanding of the criteria and performance descriptions.

Objectives and Outcomes:

- Creating or selecting effective criteria and performance level descriptions for rubrics
- Distinguishing rubrics from checklists and rating scales
- Using rubrics with students to link learning and formative assessment

Session Outline

- Rubrics: Criteria and performance level descriptions
- How to write effective rubrics
 - Critique an example,(pp.13)
- Seven strategies for using rubrics with students
 - Co-creating a rubric,(pp.14)

For More Information:

How to Create and Use Rubrics for Formative Assessment and Grading, by Susan M. Brookhart, 2013, ASCD.

Critique and Revise This Persuasive Writing Rubric

	4	3	2	1
Topic	Strongly and clearly states a personal topic/opinion.	Some reference to the issue but does not state a topic/opinion.	Personal topic/opinion is hard to understand.	Personal topic/opinion is not clearly stated.
Reasons and Support	3 reasons stated with excellent support.	3 reasons are made but the support is weak or lacking evidence.	Only 2 points are made with weak arguments.	Arguments are weak and less than 2 points are made.
Introduction	Paragraph introduces the paper and has 4 sentences.	Paragraph introduces the paper but contains only 3 sentences.	Introduction paragraph is evidence but does not introduce paper. Only 1-2 sentences.	Introduction paragraph is not evident.
Conclusion	Paragraph concludes paper and contains 4 sentences.	Paragraph concludes the paper but contains only 3 sentences.	Concluding paragraph is evident but does not conclude paper. Only 1-2 sentences.	Concluding paragraph is not evident.
Mechanics and Grammar	Contains 1-2 errors in spelling, punctuation, and grammar usage.	Contains 3-5 errors in spelling, punctuation, and grammar usage.	Contains 5-7 errors in spelling, punctuation, and grammar usage.	Contains more than 7 errors in spelling, punctuation, and grammar usage.
Organization	Paper is organized into 3 evident paragraphs of an intro, body, and conclusion. Sentences are well written.	Paper is organized into 3 evident paragraphs of an intro, body, and conclusion. Sentences are average.	Paragraph and sentence structure is inconsistent.	There is no logical organization to the paper.

Haiku Examples for Exercise in Co-creating Rubrics

An old silent pond...

A frog jumps into the pond,
splash! Silence again.

ground squirrel

balancing its tomato
on the garden fence

The sky is so blue.

The sun is so warm up high.

I love the summer.

Green and speckled legs,

Hop on logs and lily pads

Frog frog frog frog frog

blue green surfer whitecap

riding the wave, the big one

wipeout

Mountains are so big.

Mountains big as anything.

Mountains are so big.

egg shell cracked broken

dead chick inside so stinky

no Easter egg here

Peanut butter sandwich

Bread, jelly, peanut butter

I love to eat it.

brown

leaf

Brush my hair

Use hair spray

I'm good to go

Session 3

Performance Assessment

In performance assessment, students perform a task that requires they demonstrate a process, create a product, or both. Behind most learning standards lies the assumption that students are learning facts and concepts because they are useful for something. Performance assessment takes that next step, gauging how well students can use their knowledge.

Performance Assessment

Sue Brookhart

Hawker Brownlow 13th Annual
Thinking and Learning Conferences
Melbourne – Adelaide – Perth
May, 2016

Session Summary

In performance assessment, students perform a task that requires they demonstrate a process, create a product, or both. The performance is evaluated by observation and judgment based on established criteria. In fact, behind most learning standards, even those that seem completely didactic, stands the assumption that students are learning facts and concepts because they are useful for something. Performance assessment takes that next step, gauging how well students can use their knowledge.

Objectives and Outcomes:

- Identifying learning outcomes appropriate for performance assessment
- Designing performance tasks to match and assess learning goals
- Creating rubrics that link student work on the task to learning goals

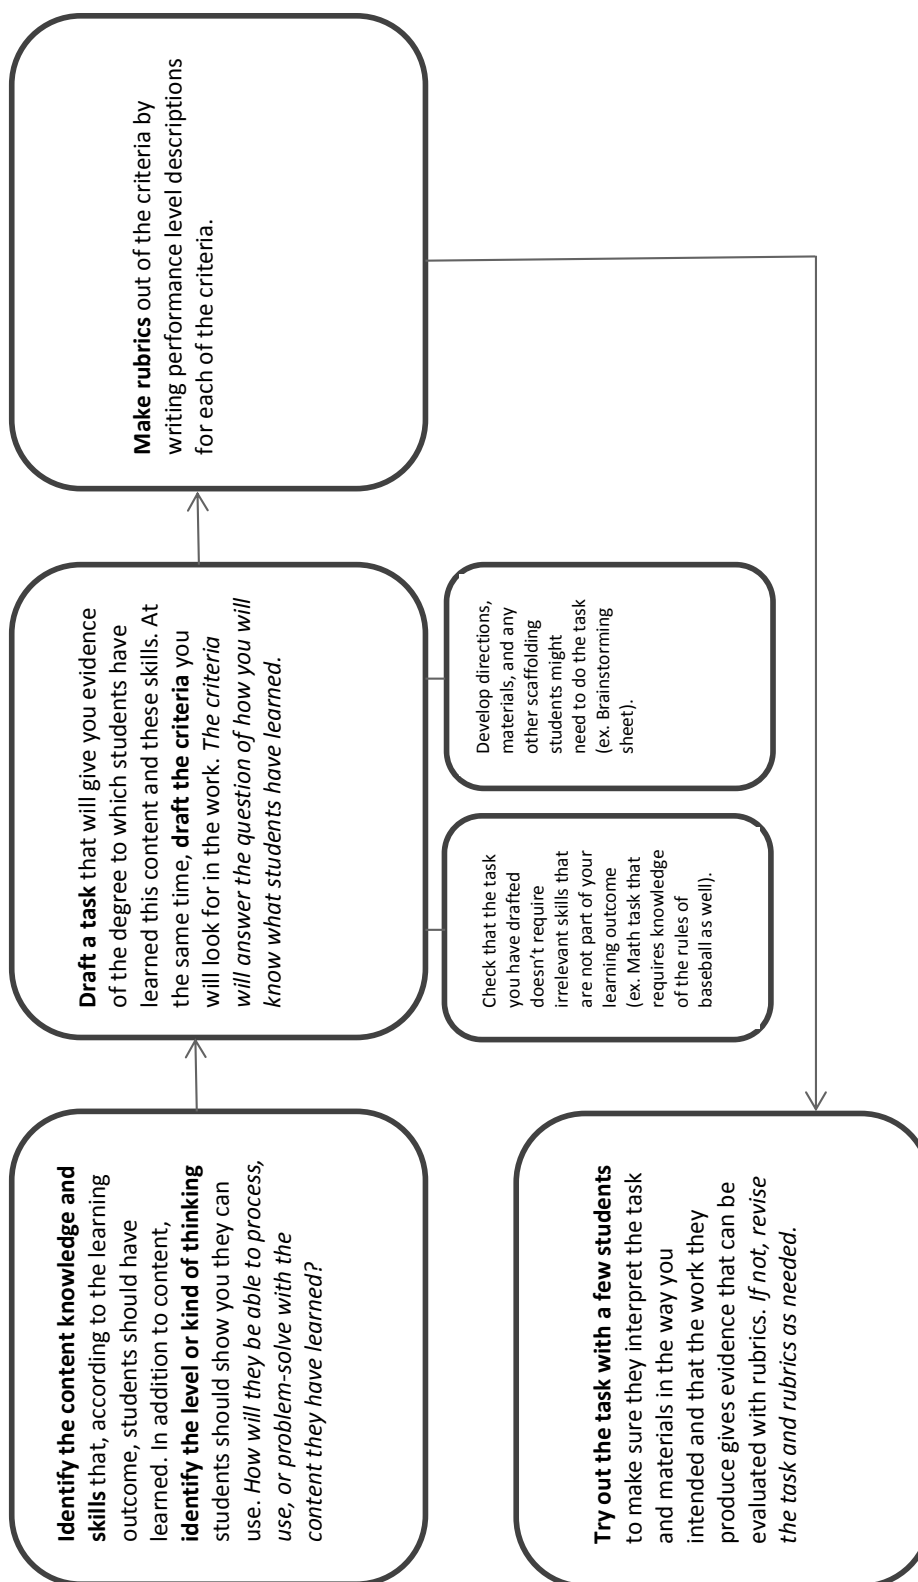

Session Outline

- Definition and uses of performance assessment
- Learning outcomes appropriate for performance assessment
- Task design for performance assessment (pp.19)
 - Analyzing tasks (pp.20-28)
- Rubrics for scoring performance assessment

Performance Assessment: Showing What Students Know and Can Do, by Susan M. Brookhart,
Learning Sciences International

Performance Assessment Design Process

Language Arts: "The Ant and the Grasshopper"

Assume the students have not read this fable before. It is novel material that presents something for students to think about.

The Ant and the Grasshopper

In a field one summer's day a Grasshopper was hopping about, chirping and singing to its heart's content. An Ant passed by, bearing along with great toil an ear of corn he was taking to the nest.

"Why not come and chat with me," said the Grasshopper, "instead of toiling and moiling in that way?" "I am helping to lay up food for the winter," said the Ant, "and recommend you to do the same."

"Why bother about winter?" said the Grasshopper; we have got plenty of food at present." But the Ant went on its way and continued its toil.

When the winter came the Grasshopper had no food and found itself dying of hunger, while it saw the ants distributing every day corn and grain from the stores they had collected in the summer. Then the Grasshopper knew:

It is best to prepare for the days of necessity.

Four examples of essay or performance assessment tasks based on this fable are presented below. (They are not fully developed and would need more complete directions for students and rubrics for scoring before using with students.) Answer the questions by analyzing the features of each task.

Example #1:

Three students picked different words to describe the grasshopper. The words they picked were: Lazy, short-sighted, and talkative. Which student do you think picked the best word to describe the grasshopper? Explain your thinking, and use details from the fable to support your choice.

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

Example #2:

Write your own fable with the moral: *It is best to prepare for the days of necessity.*

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

Example #3:

Are you more like the ant or the grasshopper? Describe how you are more like one than the other. Use details from your life to make your case.

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

Example #4:

Write a skit that dramatizes this fable. You may use props or costumes if you wish. Practice the skit to perform for your classmates.

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

Mathematics: “Phone Company Problem”

Example #1:

Minutes	0	10	20	30	40	50	60
<i>Cell King</i>	\$20.00	\$21.00	\$22.00	\$23.00	\$24.00	\$25.00	\$26.00
<i>Globally Yours</i>	\$0.00	\$4.50	\$9.00	\$13.50	\$18.00	\$22.50	\$27.00

What linear equations describe the relationships in this table? Show your work and explain your reasoning.

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

Example #2:

Minutes	0	10	20	30	40	50	60
<i>Cell King</i>	\$20.00	\$21.00	\$22.00	\$23.00	\$24.00	\$25.00	\$26.00
<i>Globally Yours</i>	\$0.00	\$4.50	\$9.00	\$13.50	\$18.00	\$22.50	\$27.00

Compare the charges for two telephone companies in the table by representing the data in at least two different ways. Which form is the most useful to you? Why?

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

Example #3:

The graph shows the rates of two cell phone companies. Write the linear equation for each line, in the form $y=mx+b$. Then explain what each of the following means in terms of cell phone costs: the slope for each line, the intercept for each line, and the point of intersection of the lines. You will have a total of five explanations. Which of these five values would be the most important to you in deciding which phone company to choose? Would the same value be the most important one for everyone? Explain your reasoning.

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

Example #4:

Two different phone companies are using different business models. One company charges a fairly large basic connection fee per month, and its charges per minute are small. The other company charges no connection fee, and its charges per minute are large. Construct a data table that shows the charges for each phone company's plan as the number of minutes used increases from zero to 120 per month. You can make up your own numbers for the connection fee and minute charges, but they must fit the business models as described. Explain how the data table can help you define a general rule for which company would be the best deal for different customers.

1. What content knowledge and thinking skills (including cognitive level) does this task require of students?
2. What criteria would you use to evaluate students' responses?
3. What could you conclude about students' knowledge and skills based on their performance on this task?
4. How much time do you think this task would take students to do?
5. Would this task best be done by an individual or group?
6. Does this task assess a student product or process?
7. Is this task highly structured, highly unstructured, or in between? Explain your reasoning.

DR SUSAN BROOKHART RESOURCES

Dr Susan M Brookhart is a consultant, author and speaker. Her interests include the role of formative and summative classroom assessment in student achievement and the connection between classroom and large-scale assessment. A former primary and middle school teacher, Susan was a faculty member at Duquesne University from 1989 to 2003. She continues to serve as senior research associate at the Center for Advancing the Study of Teaching and Learning at Duquesne. Susan has been a columnist for Phi Kappa Phi's National Forum journal and editor of Educational Measurement: Issues and Practice.

How to Create and Use Rubrics for Formative Assessment and Grading

Susan Brookhart • 9781743307731

In this comprehensive guide, the author identifies two essential components of effective rubrics: (1) criteria that relate to the learning (not the "tasks") students are being asked to demonstrate and (2) clear descriptions of performance across a continuum of quality. She also

outlines the difference between various kinds of rubrics.

Learning Targets: Helping Students Aim for Understanding in Today's Lesson

Connie Moss, Susan Brookhart • 9781760018856

In Learn Targets, Connie M. Moss and Susan M. Brookhart contend that improving student learning and achievement happens in the immediacy of 'today's lesson' - or it doesn't happen at all. The key to making today's lesson meaningful? Learning targets.

How To Design Questions And Tasks To Assess Student Thinking

Susan Brookhart • 9781760014056

With new standards emphasising higher-order thinking skills, students will have to demonstrate their ability to do far more than simply remember facts and procedures. But what's the best way for teachers to ensure that students have such skills? In this highly accessible guide,

author Susan M. Brookhart shows how to do just that.

ASCD Arias Publication: Grading and Group Work

Susan Brookhart • 9781760011192

In this book, assessment expert Susan M. Brookhart offers practical advice, strategies and examples to help teachers understand the following: what the differences are between group projects and cooperative learning; how to assess and report on (but not grade) learning skills and group interaction skills; how to assess and grade individual achievement of learning goals after group projects; and why

having students work together is a good thing, but group grades are not.

Performance Assessment Quick Reference Guide

Susan Brookhart • 9781742397375

Teachers need to know not only what students know, but also what they can do. They need to be able to quickly gauge how well students can use their knowledge. This six-page quick reference guide gives teachers at-a-glance information on learning outcomes that are well suited to performance assessment and incorporating performance assessment into instructional planning. It also provides practical tips for designing and selecting rubric templates and performance assessment tasks and shows teachers how to use performance assessment for formative and summative purposes.

How to Make Decisions with Different Kinds of Student Assessment Data

Susan Brookhart • 9781760019549

Susan M. Brookhart helps teachers and administrators understand the critical elements and nuances of assessment data and how that information can best be used to inform improvement efforts in the school or district. Readers will learn what different kinds of data can - and cannot - tell us about student learning; what different analyses reveal about changes in student achievement; how to interpret, use and share relevant data; and how to create a model to go from problem to solution in a data-based decision-making process. This book offers a path to better understanding, more accurate interpretation of assessment results and more effective use of data to improve teaching and learning.
