<b>Format:</b>	255 x 180, 198 pages
<b>Age Range:</b>	P-12
<b>Category:</b>	Professional Development
<b>Subject:</b>	Professional Development

## Summary:

Renowned author and educator Eric Jensen has completely revised and updated his classic work *Teaching with the Brain in Mind*, featuring new research and practical strategies to enhance student comprehension and improve student achievement.

He explores topics such as motivation, critical thinking skills, environmental factors, the “social brain”, emotions and memory, and offers insights on a number of issues including:

- Why to start every class with opening activities that put students into receptive states
- How to tempt students to focus more attention on learning tasks
- Why to use compelling questions, personal stories, controversies, and celebrations in your teaching
- How seating, room temperature, lighting, and noise affect learning
- Why making your classroom a more positive social experience improves achievement
- The value of feedback
- Why stress impedes learning

Educators have so much influence on student's brains, they need to take advantage of all the revelations science is providing. This resource helps you do just that.
