Summary:

Author and educator Ted McCain concisely lays out the argument for guiding students to become independent and successful critical thinkers. Teaching for Tomorrow brings everyday life encounters and situations to the classroom, challenging students to engage more deeply in their learning and teachers in their teaching. Eliminating the typical stand and deliver approach, McCain hopes educators will focus on instruction that allows students to create knowledge for themselves. Gaining real-world skills rather than just 'school' skills, students are engaged in thoughtful work, learning to collaborate, taking responsibility for their own time and tasks, and becoming creative problem solvers in the classroom and for life beyond.
