Summary:

Teaching for Successful Intelligence has three parts. Part I introduces the theory of successful intelligence and gives underlying research support. Part II concentrates on the three successful intelligence abilities – analytical, creative and practical – and how teachers can foster those skills through classroom teaching. Part III focuses on how teachers design and use instructional units that facilitate students' learning using the three thinking skills in the classroom. The final chapter is an extended illustration of a successful intelligence unit that has been used in a real classroom, gives readers the opportunity to see the whole that comes from the parts by providing examples of effectively taught lessons for successful intelligence.
