<b>Subject:</b>	Psychology

## Summary:

Psychology is the study of mental process and behaviour. The *Psychology: Student Book* introduces students to this fascinating subject and provides insights into the various ways in which we as intelligent humans attempt to know ourselves. Some fields of psychology discussed in this comprehensive unit are: hereditary and environmental factors, how people solve problems, intelligence, perception of sensations, learning processes, motivations and emotions, frustration and conflict, psychotherapies, personality and social behaviour. The self-directed activities emphasise higher level thinking skills and are keyed to Bloom's revised Taxonomy. This *Teacher Guide* includes the entire text of the student book and answers, for teacher reference, as well as providing pre- and post-tests, quizzes, puzzles, a glossary and helpful background information.
