| RRP: | \$17.95 |
| Format: | A4, 64 pages |
| Age Range: | Years 5–12 |
| Category: | |
| Subject: | |

Summary:

Psychology is the study of mental process and behaviour. This book introduces students to this fascinating subject and provides insights into the various ways in which we as intelligent humans attempt to know ourselves. Some fields of psychology discussed in this comprehensive unit are: hereditary and environmental factors, how people solve problems, intelligence, perception of sensations, learning processes, motivations and emotions, frustration and conflict, psychotherapies, personality, and social behaviour. The self-directed activities emphasise higher level thinking skills and are keyed to Bloom's revised Taxonomy. These stimulating activities, based upon information given and outside research, encourage critical and creative thinking.
