ISBN:	1 74170 668 8
Code:	HB6688
RRP:	24.95
Age Range:	P-12
Category:	Professional Development
Subject:	Professional Development

Summary:

It's a girl thing! How does the female brain differ from the male brain?

This practical volume uncovers the intricacies and idiosyncrasies of the female brain that impact on how a girl engages with the world around her, and how the grey matter between her ears plays a crucial and often gender-specific role in how she also behaves and learns.

The first section looks at the differences that exist between boys and girls. Section two maps out the links between the developing brain and 'growing up female' as we seek to improve our understanding of how the brain changes, how the female brain differs from the male brain, and how all of this can impact on behaviour, learning and overall growth and development. The final section of this book takes all of the information in the earlier chapters and focuses on three particular areas – emotions, relationships and schooling.

The book is a neurological look at the amazing universe that exists between the ears of the girls around us provides us with a framework for creating social and learning environments that recognise the intricacies of the developing female brain.
