**Learning Area:** Geography

## Supplemental

**Resource:** Download reproducible resources at [go.hbe.com.au](http://go.hbe.com.au)

## Summary:

This amazing resource will lead young learners around the world on a whirlwind tour. You and your students will visit 49 famous landmarks, both natural and built, such as the Great Pyramid, the Taj Mahal, Stonehenge, Machu Picchu, the Great Barrier Reef and many more!

Every structure visited in *Famous Landmarks* is introduced through an initial information page that gives important geographical information about the landmark. This page contains a few questions, some of which may be answered by carefully reading the page, while others require further research. Vocabulary words are printed in bold type to highlight an avenue of study that might need to be researched. Every landmark also features four projects in a different learning area or skill set, supporting the integration of geography education with learning in other subjects. A third activity page offers a variety of smaller activities – research projects, mazes, crosswords and creative writing or drawing exercises.

A perfect complement for your Australian Curriculum-aligned study of world geography, this exciting book is designed to encourage students to use their natural curiosity to explore culture, research different ways of life and create projects based on what they learn. Using the material from this book, your Years 4–6 students will learn to make connections to the real world, visit intriguing places and discover history, art, architecture, maths, language and science as well as geography.

*Circling the World: Famous Landmarks* includes information sheets, websites and activities that offer investigative learning ideas, higher-level thinking questions, engaging art projects and interesting research opportunities to excite your students.
