Summary:

The sequentially organised lessons in this book allow you to use your own curriculum while guiding your class to develop increasingly complex social and intellectual skills. Group development at four major levels results in students gaining the ability to create and coordinate group projects of benefit to the community. At the same time, the step-by-step, solidly structured lessons introduce the class to examples from nature that apply to their own classroom behaviour. Each of the 12 illustrated chapters includes three linked activity units, ready-to-use resources, follow-up suggestions, teacher tips and a variety of resources.
