

"Body Pattern #1"

-Use as body part layout guide. Paste all parts directly on paper body, except bladder.

Introduction

This book is designed to provide information about the human body for the primary child. The teacher need only photocopy the relevant pages and distribute them for single classroom use.

Parts of the human body are explained and illustrated. There are several ways that these explanations and illustrations can be used.

1. Make a full-size tracing of each child's body on poster or other sturdy paper.
2. Cut, paste, colour, and follow directions to make the various parts of the body.
3. Look at the "body legend" and place the body part correctly on the traced body.
4. Photocopy the explanations of the functions of the body parts. Discuss the information with the students.
5. Make the explanation sheets into a book and fasten with brads or string.
(Children learning writing skills can copy these explanations off the board as a writing exercise.)
6. Have each child take the booklet home along with his or her completed "life-size" body. It will be fun to share with the family!

It is our hope that if children learn about their bodies at an early age, they will not abuse them later. We hope they will join with us and become excited about learning what is going on inside the body and strive to stay healthy!

Table of Contents

Introduction	1
Body Pattern #1	2
Body Pattern #1 (teacher option - includes reproductive organs)	3
Body Pattern #2	4
My Brain	5
My Heart	7
My Kidneys	9
My Bladder	9
