FOREWORD

This package on **The Media** is designed to provide a range of activities suitable for both group and individual work. The emphasis is on radio and television in order to actively involve students in listening and viewing skills; speaking and discussion skills and research skills.

Each topic is discussed separately. Part One looks at the structure and impact of radio, and Part Two examines the use and influence of television within a social context.

Whilst the exercises in this package have been placed in sequential order, the loose-leaf format does allow for varied combinations of classroom activities.
