The Six Pillars of Performance Task Development

1. Establish clear performance goals (content standards).
2. Seek to employ “authentic” tasks and products.
3. Teach and emphasise criteria levels and performance standards.
4. Provide models and demonstrations of excellence.
5. Teach strategies explicitly.
6. Use ongoing assessments for feedback and adjustment.

Performance-based instruction is an effective methodology because it allows the teacher to continually monitor for student understanding and be able to then adjust the instruction to clarify and/or eliminate potential areas of confusion and misunderstanding. On the following pages explanations are given for each of the six basic principles that provide the framework for the design, development and implementation of performance-based learning. Each principle is related to one or more specific steps in task design and development.

1. SET UP CLEAR PERFORMANCE GOALS

Principles

- Focus on results (content standards).
- Focus on what students should know and be able to do.
- What is *not* taught is just as important as what *is* taught.
- Concentrate on the critical and essential.
- Concentrate on clear articulation and communication of the performance criteria.

Tasks

- Begin all designs with a clear statement of what is to result: the intended achievement(s) as well as how that achievement will be assessed. (For help in doing this, see Figure 2.1, Sample Project Organiser.)
- Determine those learner goals or content standards that are to be assessed. (What critical and essential outcomes do we want to evaluate?)
- Identify observable and meaningful indicators for each standard. (What must students show they know and can do well in order to prove that they understand? How will we know it when we see it?)

What we do not teach is just as important as what we do teach. By being selective in our choices, we are better able to focus the curriculum on the

| SAMPLE PROJECT ORGANISER | | |
|---|---|--|
| CURRICULUM AREAS: PROJECT TITLE: YEAR LEVEL: PROJECT LENGTH: RESOURCES/MATERIALS: | | |
| PROJECT DESCRIPTION | | |
| Description of the task/project only [not the steps for lesson initiation, procedures or assessment] | | |
| STANDARDS ADDRESSED | | |
| MATHEMATICS | VISUAL ARTS | |
| List of content standards and process skills addressed by this project/activity | List of content standards and process skills addressed by this project/activity | |
| ENGLISH | SCIENCE | |
| List of content standards and process skills addressed by this project/activity | List of content standards and process skills addressed by this project/activity | |
| TECHNOLOGY | SOCIAL STUDIES | |
| List of content standards and process skills addressed by this project/activity | List of content standards and process skills addressed by this project/activity | |
| PROJECT OBJECTIVES | | |
| COMPREHENSION OF CONCEPTS | SKILL AND PROCESS DEVELOPMENT | |
| Project objectives for comprehension refer to concepts for which the students will be able to demonstrate their understanding at the task's completion. [It is <i>neither</i> the activity that helps accomplish the learning <i>nor</i> the teacher's behaviour]. 'AT THE END OF THIS PROJECT, THE STUDENT WILL BE ABLE TO DEMONSTRATE COMPREHENSION OF . . .' | Skill or process development objectives refer to those specific skills or processes that the students will be able to demonstrate at project completion | |
| PRODUCTS AND/OR PERFORMANCES | | |
| GROUP PRODUCTS | INDIVIDUAL PRODUCTS | EXTENSIONS |
| • List the product created by the group | • List the product created by the individual group members | • List any possible project extensions |
| CRITERIA FOR PROJECT EVALUATION | | |
| GROUP PRODUCTS | INDIVIDUAL PRODUCTS | EXTENSIONS |
| Keep in mind: Criteria for group and individual products become the project rubric criteria | | |

Teaching to the Eight Intelligences: Ronis's Quick Reference Guide

| Intelligence | Examples of Relevant Behaviours | Teaching Activities | Teaching Materials | Instructional Strategies |
|---|---|---|---|--|
| LINGUISTIC The ability to use language effectively | <ul style="list-style-type: none"> Presenting persuasive arguments Composing poetry Recognizing subtle nuances in word meanings | Lectures, discussions, word games, storytelling, reading, journal or poetry writing | Books, tapes, records, computers, and software | Read about it, talk about it, listen to it, write about it |
| LOGICAL-MATHEMATICAL The ability to form hypotheses, draw conclusions, and reason logically | <ul style="list-style-type: none"> Formulating and testing hypotheses Quickly finding clear and direct solutions to problems Generating mathematical proofs | Critical-thinking tasks, brain teasers, problem solving, puzzles, number games, mental calculations | Calculators, computers, manipulatives, math games, puzzles | Think about it critically, analyze it, conceptualize it, quantify it |
| SPATIAL The ability to observe details as well as imagine and "manipulate" objects mentally | <ul style="list-style-type: none"> Creating mental images Drawing an object accurately Making fine discriminations among very similar objects | Visual presentations, artistic activities, creative games, visualization | Graphs, maps, videos, construction toys [LEGO sets], art materials, optical illusions, cameras, picture library | See it, draw it, visualize it, construct it, color it, create it |
| BODILY-KINESTHETIC The ability to use one's body skillfully | <ul style="list-style-type: none"> Dancing Playing a sport Performing athletically | Dance, performance activities, sports activities, tactile activities | Building tools, art supplies, sports equipment, manipulatives | Build it, perform it, touch it, "feel" it inside, dance it |
| MUSICAL The ability to create, appreciate, and understand music | <ul style="list-style-type: none"> Playing a musical instrument Composing music Identifying music's underlying structure | Lyrics, rhythms, and melodies that aid instruction | Musical instruments, tapes and tape recorder, CDs and CD player | Sing it, play it, "rap" it, listen to it, create it |
| INTRAPERSONAL Sensitivity to subtle aspects of other people's behavior | <ul style="list-style-type: none"> Demonstrating sensitivity to another's mood Detecting another's underlying intentions and motives Using knowledge of others to influence their thoughts and behaviors | Cooperative and collaborative learning, peer tutoring, peer counseling | Board games, room arrangement, role-play props | Teach it to each other, collaborate on it, interact with it |
| INTRAPERSONAL Awareness of the subtle aspects of one's own feelings and motives | <ul style="list-style-type: none"> Discriminating among such similar emotions as anger and frustration Recognizing the motives behind one's own behavior | Student reflection, independent study, alternative options for learning | Educational computer software, reflection guides, journals | Connect it to your personal life, analyze your behavior and motives |
| NATURALIST The ability to recognize patterns in nature as well as subtle variances among natural objects and life forms | <ul style="list-style-type: none"> Differentiating among similar species Classifying natural forms Practical application of one's knowledge of nature (e.g., gardening, bird watching) | Moving the learning environment outdoors | Magnifying glass, drawing supplies, guide books | Through nature identify patterns and similarities, connect with previous experiences |

Figure 3.1

Assessment Vocabulary Based on “Bloom’s Taxonomy” of Cognitive Function

| Cognitive Domain | Descriptive Verbs | Assessment Words And Phrases |
|------------------|---|--|
| KNOWLEDGE | identify, define, list, describe, name, classify | describe . . . select . . . who, what, where, when, why, how, which one, how much |
| COMPREHENSION | explain, outline, propose, infer, modify, vary, summarise, change | what does this mean? rephrase or restate in your own words . . . explain why . . . summarise, outline . . . |
| APPLICATION | explain, estimate, plan, solve, predict | explain what would happen if . . . what and how much would change if . . .? |
| ANALYSIS | compare, contrast, equate, examine, deduce | what conclusions can be made from . . .? what is the relationship of . . .? which concepts are the most important? |
| SYNTHESIS | create, design, plan, imagine, set up | create, design, choose, plan |
| EVALUATION | evaluate, judge, assess, determine, conclude, critique, rank | which is more valid/logical/ appropriate? compare and contrast, critique . . . |

Figure 3.3

New Brain Research and Twelve Implications for Teaching

| Recent Research Suggests | Teaching Suggestions |
|--|--|
| <ol style="list-style-type: none"> 1. The brain performs many functions simultaneously. Learning is enhanced by a rich environment containing a variety of stimuli. 2. Learning engages the entire physiology. Physical development, personal comfort and emotional state affect the ability to learn. | <ol style="list-style-type: none"> 1. Present content through a variety of teaching strategies, such as physical activities, individualised learning times, group interactions, artistic variations and musical interpretations to help orchestrate student experiences. 2. Be aware that children mature at different rates; chronological age may not reflect the student's readiness to learn. Incorporate facets of health (stress management, nutrition and exercise) into the learning process. |
