Summary:
Dimensions of Learning, an instructional framework founded on the best of what researchers and theorists know about learning, teaches that learning has five dimensions: positive attitudes and perceptions, acquiring and integrating knowledge, extending and refining knowledge, using knowledge meaningfully, and productive habits of mind. Dimensions of Learning is a valuable tool for reorganising curriculum, instruction and assessment. This manual discusses the five dimensions in detail and describes hundreds of teaching strategies that support them. The Second Edition contains an expanded discussion of Dimension Five and a new section on performance assessment and rubrics. Includes an index.
